CWM

coating weight management

Powered by Nordson Measurement & Control

The ultimate solution to supervise and control a coating-laminating job.

Sensing unit NM-9000 provided by Nordson Measurement & Control

Monitoring and managing the coating weight
in a converting process has never been so accurate and reliable.

Nordmeccanica in cooperation with Nordson
has developed the ultimate totally integrated package of sensing unit and process control.

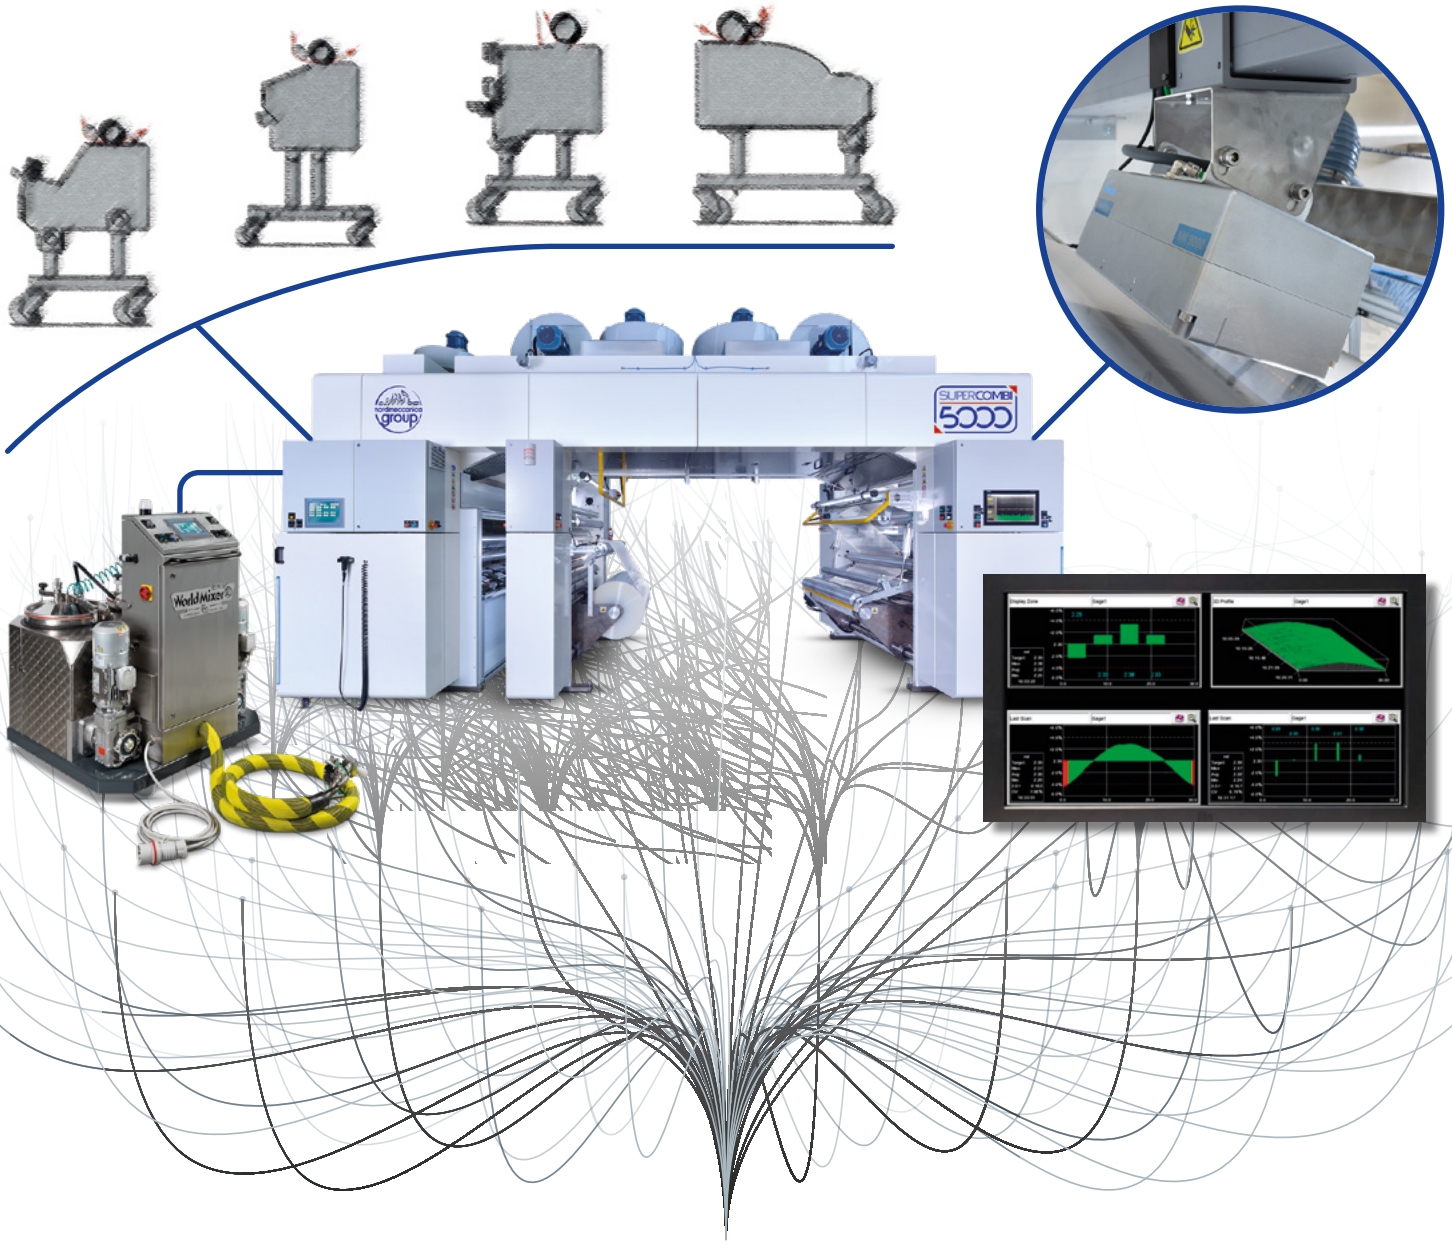

Coating technology can now be managed in total automation through the integration
of Nordmeccanica machine set-up with the superior reliability of Nordson instruments.

No undesired variables interferences, no complex operator handled preliminary procedures.

Simple, easy and effective, the Nordmeccanica way.

Process management will cover multi rollers coating processes as well
as Solvent Less lamination in the widest available range of coating weights.

Invented here, **perfected** here !
